

Database Backup & Installation

Backup from old Compass Software Database

Please make sure to always create a backup of your current Compass Software database before trying to install a different backup!

Navigate to your Compass Software installation path and copy the “DATABASE” folder, then paste it into a new backup folder, e.g., C:\CSDBBackup\”.

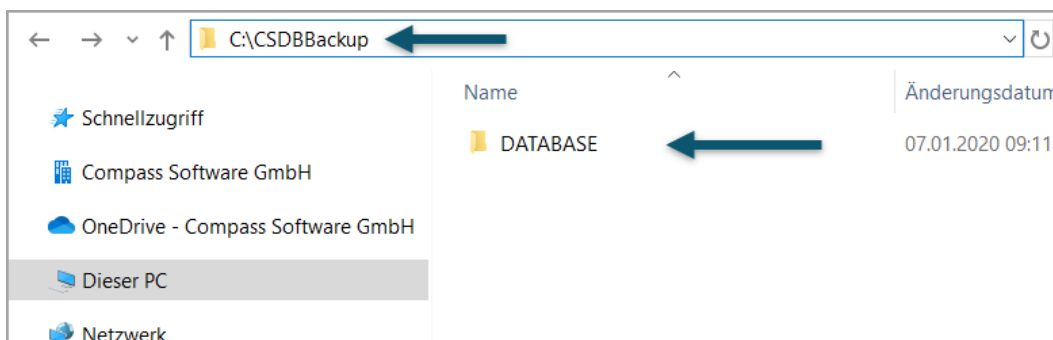

The DATABASE folder contains all your Compass Software data (stairs, predefinitions, etc.).

How to Install an Old Database Backup to a new Compass Software Version

1. Step: Navigate to the folder where you copied your Compass Software backup to, e.g., “C:\CSDBBackup\DATABASE”.

Copy the “DATABASE” backup folder into the installation path of your Compass Software (“C:\Programs (x86)\Compass Software\Treppensoftware-Programm ND”) and overwrite the existing files!

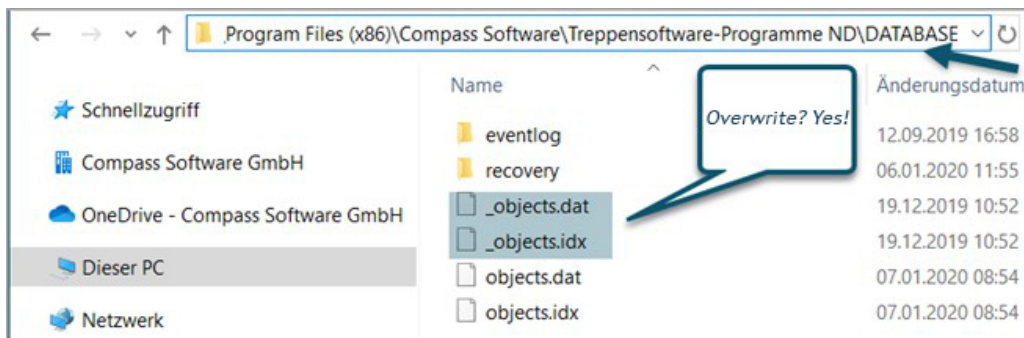

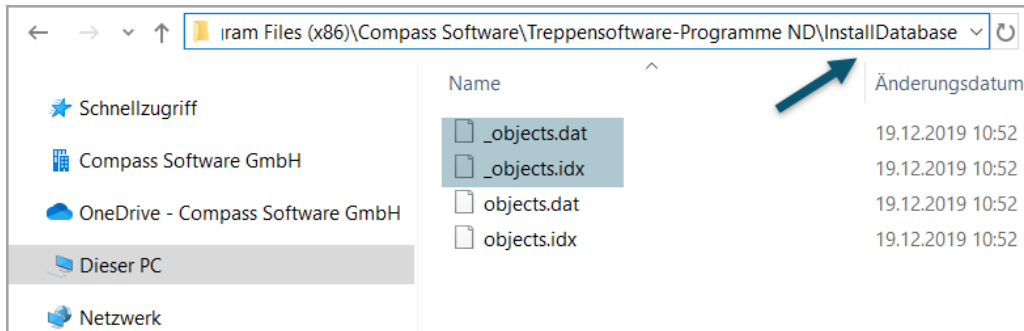

Database Backup & Installation

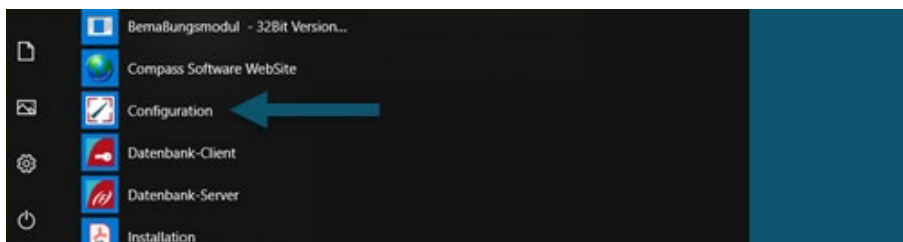

2. Step: Navigate to the subfolder “InstallDatabase” in your Compass Software installation path. This folder contains two files named **_objects.dat** & **_objects.idx**.

Copy these files and paste them both into your DATABASE folder, located in your Compass Software installation path.

Overwrite the files when Windows prompts you to do so!

3. Step: Initiate the Compass Software **Configuration** tool (**Start / Programs / Compass Software / Configuration**).

4. Step: First **Convert ... (1)** your database and then **Update ... (2)** it.
